

VETI
Day/Night Sensor

The DNS10 Day/Night sensor automatically turns lighting on or off at dusk and dawn based on the ambient light levels detected by the sensor. It features adjustable lux settings and integrates easily into new or existing installations. Designed specifically for outdoor use, the DNS10 must be installed in an uncovered location to function accurately. Its IP54-rated housing provides protection against limited dust ingress and water splashes from any direction, making it suitable for direct exposure to rain (though not submersion), while the IP68-rated cable gland offers superior protection against dust and prolonged water immersion at the wiring point. Ideal for outdoor lighting, industrial, commercial, residential, and security applications, it enhances energy efficiency and safety by activating lights only when needed. Simple yet effective, the 10A rated current of the DNS10 adds to its convenience and sustainability. Installation must be done by a qualified electrician.

Adjustable Lux
From 5 to 50

IP54 Water & Dust Resistant
for Outdoor Use

Cable
Gland

Bracket & Screws
Included

Product Specification

Function	Range
Ambient Light	5 to 50 Lux (Adjustable)
Voltage	220 to 240V AC
Power Frequency	50/60Hz
Rated Current	10A
Mounting	Walls and Poles
Working Temperature	-20°C to 40°C
Working Humidity	<93% RH
IP Rating	IP54 (Outdoor installation)
Standards	IEC 60669-1 / 60669-2-1 AS/NZS 60669.1 / 60669.2.1

DNS10 | 10A Day/Night Sensor
